eNET Monitoring & DNC announces the release of a powerful and versatile new Smart Manufacturing software- eNET Client

Oct 1st, 2023

Greenfield, WI- This newly released American-made software greatly expands eNET's machine monitoring reporting, by giving users the ability to automate and even totally customize Machine Monitoring Reports by leveraging a powerful new software from Microsoft called Power BI, which comes built-into every seat of eNET Client. There is also an easy to use Monitoring Data Explorer UI which can be displayed in a timeline or graph view, allowing for deeper dives into your monitoring data, along with the password-protected ability for management to make edits to past events, part number, operator and job number monitoring data. Q.C. and Maintenance Department Dashboards can be setup in eNET Client to gain valuable visibility into problematic bottlenecks of your manufacturing operations, helping to increase machine up-time. eNET Client even includes a full seat of the always popular eNET LT software, which continues to offer the most trusted CNC File Editor in the industry, including the Smart File Compare feature and the 3-D Back-plotting capabilities for G-code programs. In celebration of the launch of eNET Client there are generous promotional discounts being offered for a limited time to both new and existing eNET customers!

Company Profile
eNET Monitoring & DNC is the midwest's industry leading provider of secure and robust American-made DNC & Machine Monitoring solutions, serving the Smart Manufacturing industry for over 30 years.
